

UNDERSTANDING KERATOCONUS & THE IMPORTANCE OF EARLY DIAGNOSIS

Keratoconus is an underdiagnosed and progressive eye disease.

If you are experiencing vision changes and have symptoms of keratoconus, don't wait!
Schedule an appointment with an eye doctor to get screened.
Your vision may continue to get worse, so early diagnosis is critical.

WHAT IS KERATOCONUS?

Keratoconus
[ker-uh-toh-koh-nuhs]

Keratoconus or "KC" is a sight-threatening eye disease in which the normally round dome-shaped cornea progressively thins causing a cone-like bulge to develop. This results in significant visual loss.¹

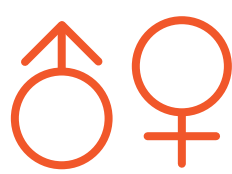

Normal

Keratoconus

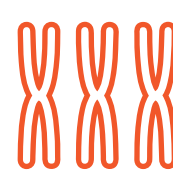

WHO'S AFFECTED BY KERATOCONUS?

Keratoconus can affect anyone although some studies have shown a higher rate in males.²

The disease is also **found in all ethnic groups** with some studies showing higher incidence rates among Asian, Black, and Hispanic populations.³

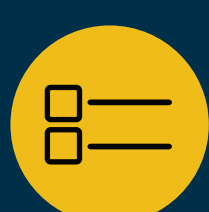

Research shows that **an estimated 5-30% of people with Down Syndrome are also affected** by keratoconus.^{4,5}

SIGNS & SYMPTOMS OF KERATOCONUS⁶

Usually first appear in the late teens and early twenties⁷

Excessive Eye Rubbing

Family History of Keratoconus

Difficulty Seeing at Night

Frequent Prescription Changes

Frequent Headaches

Vision That Cannot Be Fully Corrected With Glasses or Contacts

RISK FACTORS FOR KERATOCONUS

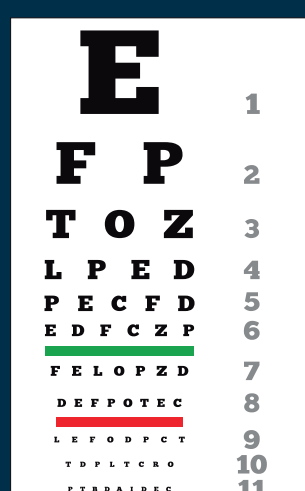

While the **exact cause of keratoconus is unknown**, it is believed that **genetics**, the **environment**, such as allergens & eye rubbing, and **hormonal changes** all play a role.⁸

The simple reflexive act of **rubbing your eyes** can be both a **cause** and a **symptom** of keratoconus.

Some KC cases have a hereditary component and studies indicate that **~10% of patients have affected relatives**.⁹

IMPORTANCE OF EARLY DETECTION

Example of Keratoconus Progression Over Time*

KC is a **progressive disease** which worsens over time, so **early diagnosis is critical**.

*Individual outcomes may vary. The depiction may not reflect the typical keratoconus patient's experience and the timeline may vary. It is not intended to represent or guarantee that anyone will have the same or similar outcomes.

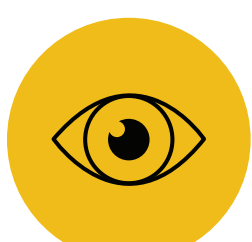

TREATMENT OPTIONS FOR KERATOCONUS⁹

Eyeglasses or Soft Contact Lenses

Specialty Contact Lenses (RGP, Scleral, Hybrid)

Corneal Cross-Linking (CXL)

Intracorneal Ring Segments (ICRS)

Corneal Transplant Surgery
